

Workbench Software Services

On-Demand Hosted Software as a service - SaaS

Software as a service (SaaS) is a method of providing software applications over the Internet. Users access the software applications over the internet using a hosted service. No need to install or maintain software or hardware. Instead you simply access it via the Internet.

Workbench Software provides SaaS, Web-based, On-Demand, Hosted software. Workbench offers comprehensive packaged services. You can focus on taking advantage of the software applications, not investing and setting up the IT infrastructure to support it. Workbench Software services include software applications, managed-services, security, database licensing, and stands behind availability, and performance. Offered hosting architectures can scale to meet customer demand.

ERP Integration

Workbench Software offers off-the-shelf integration with the Oracle eBusiness Suite and other popular ERP systems. We also offer templates that can be customized to meet specific needs.
